VIDEO VISITATION SYSTEM

The **Video Visitation System (VVS)** from Trenttech allows for the inmate and visitor stations to be located in completely separate locations to maintain your security. Combating rising staff costs and the ever present danger of transporting inmates, the **VVS** gives you the ability to limit staff burden while eliminating an avenue for the introduction of contraband.

The **VVS** can also be configured stand-alone or fully integrated into an existing or new command and control station giving complete control over the scheduling and monitoring of visits without all the hassle. As an option, video visits can even be recorded and logged, maintaining valuable information for future use.

VVS station units comes factory complete and ready to be installed by our experienced field technicians. We can give you the quality and the "high tech" features you've come to expect from the experienced industry leader.
